Who we are

Purpose-built storage solutions for active travel

Doing R Bit designs and manufactures timber cycle and scooter storage structures in-house in the UK.

Our work combines practical everyday storage, timber craftsmanship and a focus on more sustainable transport.

Our sustainability approach

Three tangible commitments across materials, manufacture and transport

Sustainably sourced timber

Responsibly sourced timber used in our products.

UK in-house manufacture

Products manufactured by our own team in the UK.

Fully electric vehicle

An electric company van supporting our operations.

Manufactured in-house

From timber components to complete structural assemblies

Visible craftsmanship in structural framing, braces and timber detailing.

Built around robust timber construction

A closer look at the structure

From workshop to installation

Manufacture, assembly and delivery in practice

On-site assembly and installation of a timber cycle storage structure.

Storage solutions supporting Active Travel

Examples of completed timber cycle storage structures

Completed timber cycle shelters

Spacious covered cycle parking

Cycle shelter in everyday use

Timber shelters in landscaped settings

Open-fronted timber shelter

Timber structure with integrated screening

Versatile Cycle Storage Solutions

8 Cycle Junior “Bike Barn” for Woodseats Primary School, Sheffield.

“Bike Barn” for 30 Junior cycles and 10 Adult cycles installed at Seamer and Irton Primary School funded by York and North Yorkshire Combined Authority.

Secure and Enclosed Cycle Storage

Fully enclosed secure timber cycle storage with keypad access, installed at Sheffield Children's Hospital NHS Trust.

Secure cycle store was fitted with a Living Green Roof.

Large Scale Bespoke Cycle Storage

Large Bespoke shelter installed at Withington Community Diagnostics Centre NHS Trust

Schools Cycle Storage

8 Cycle Junior “Bike Barn” installed at Woodseats Primary School, Sheffield.

Combined “Bike and Scooter Barn” installed at Phillimore Primary School, Sheffield.

Living Green Roof

All of our cycle and scooter shelters are fitted with a living green roof, transforming everyday infrastructure into an attractive, environmentally friendly feature.

- **Supports Biodiversity**
  Creates valuable habitats for plants, insects and urban wildlife.

- **Encourages Pollinators**
  Provides a source of food and habitat for bees, butterflies and other beneficial insects.

- **Helps Improve Air Quality**
  Vegetation can capture airborne particulates and contribute to cleaner urban environments.

- **Supports Local Sustainability Goals**
  Complements local authority clean air initiatives, biodiversity strategies and wider environmental commitments.

More than just shelter — a practical investment in greener spaces, enhanced biodiversity and a more sustainable future.

Electric transport in our operations

Our fully electric, branded company vehicle

A visible part of our commitment to lower-emission transport.

SUSTAINABLE INSTALLATION

A concrete-free alternative

Junior “Bike Barn” installed on a treated sustainable timber base, overlaid with Phenolic Marine Birch Ply — instead of a traditional concrete base on grass.

BENEFITS OF THIS METHOD

01 **No spoil removal**
No skip or associated transport emissions.

02 **No stone sub-base**
Avoids an additional delivery vehicle.

03 **No concrete required**
Eliminates concrete delivery to site.

04 **No curing delay**
No return visit to wait for concrete to cure.

05 **No Heras fencing**
Avoids temporary protective fencing costs.

The sustainable way

Responsible timber. British manufacture. Electric transport.

- **Sustainably sourced timber**
- **Manufactured in-house in the UK**
- **Fully electric company vehicle**
- **All products are manufactured using renewable energy.**
